

PRODUCT INFORMATION

HASCO X-8277

Description

Hasco X-8277 is a thixotropic, general purpose rust preventative that provides a thick coating on metal surfaces. Hasco X-8277 provides excellent corrosion protection and lubrication for light duty metal forming operations. Due to its thixotropic properties, the resultant coating is self-forming.

Application

Since Hasco X-8277 is thixotropic, it is a thick gel when stationary and becomes fluid when mixed. X-8277 can be swabbed, brushed or sprayed on steel parts when mixed.

Advantages

- When applied properly, X-8277 can provide excellent indoor rust protection for up to five years. If covered outdoors, three to five years of rust protection can be expected .
- Thick coating prevents corrosion in acidic environments.
- Thixotropic nature reduces dripping associated with oil products.
- Very low VOC.
- Can be removed with hot water pressure washer.

Typical Characteristics

Appearance	Hazy Blue Cream
Specific Gravity	0.842 – 0.882
VOC	20 g/l
Flash Point (COC)	> 320F
