

How Mobil ServSM Lubricant Analysis saves a construction company \$91k/year

A Chicago-based construction management services company operates a mobile fleet in several locations around the country, often in particularly severe operating conditions. This increases their risk of component contamination, wear and premature failure. The company contacted the **Mobil ServSM Engineering** team to identify a maintenance solution to address these issues and help ensure optimal equipment performance. The **Mobil Serv Engineering** team recommended a comprehensive fleet maintenance review twice a year and **Mobil ServSM Lubricant Analysis** to monitor the health of the equipment and oils.

The company reports outstanding results due to the collaboration with **Mobil Serv**.

Helps increase personnel safety

Reduces machine-human interaction by 174 hours/year.

Eliminates equipment failure

Proactively identifies impending equipment issues before breakdown can occur.

-174 hours/year

Allows for the reallocation of resources to increase production.

-\$91k/year

Company reports reduced labor activities saves an estimated \$91,860.
